

More Help

There's a tremendous amount of help available on the Internet, to suit all levels of understanding. And you can ask your own questions in the thousands of newsgroups and forums, or often find the answer immediately by searching at [Google Groups](#), the UseNet archive (*because it's a racing cert it's been asked before*).

A useful forum is .net magazine's Webtips. You can access it through their [web site](#).

Learning how to put a site together is covered at:

[So, you want to make a Web page!](#) - a tutorial aimed at the complete beginner. A bit enthusiastic (imagine an American Blue Peter presenter).

[NCSA - A Beginner's Guide to HTML](#). A more sober introduction, a good reference to print out and keep handy.

[Dave Raggett's Guides](#) cover the basics of both HTML and Cascading Style Sheets (CSS) in a very readable style.

[W3Schools Online Web Tutorials](#), deeper coverage, a good resource for all aspects of website production, in the form of short tutorials with plenty of practical examples.

[.net magazine website](#), with lots of information on getting your site up and running, using CSS, adding Javascript and optimising your graphics.

[Webmonkey](#) have more stuff, with sections on [browser compatibility](#) and (if you're really struggling) site-building [lessons for kids](#).

[Javascript Source](#) has Javascript and DHTML tutorials and reference material.

[Dynamic Drive](#) has a well-organised selection of free scripts for special effects, all with a demo.

And don't forget the local library, it's all in books as well!

Free software - Keep an eye on the computer magazines, the cover disks often contain free older versions of top programs, or can save you the phone time of a big download.

The [.net magazine website](#) also has a selection of free internet-related programs.

More free stuff at [Completely FREE Software](#) and [No-Nags](#).

Evaluation versions of commercial programs from [ZDNet Downloads](#) and [TuCows](#).

To help your visibility in the neighbourhood,

[Search Engine Watch](#), many more tips and much more info than I've tried to cover, and links to some popular engines.

Submit your site to several engines at once from [.net magazine's site](#).

[MD105 Lions](#) section of the Open Directory Project - call and submit your site!

Club Websites - Helpful Links

And while you're passing, have a look at [Mexborough's site](#).

You can [e-mail me](#) with any comments or queries.
